I agree with Sren that in Dev mode the DNG previews are faster. I will also say that I have not yet used all of the features of Live view which will extend its usefulness to me. Out of curiosity I used the Open ... Note, too, that as of this writing I have only had the beta suites installed for about a week and still need to get to know the interface, which now boasts refined view options, and I have not used the Raw process, which is included with access to the expanded Developer mode. What about Convert **?** Will this function be included with the price of CC with the new subscription model? And will there be Raw download as an option?
Thank you for the detailed report. I would like to see some of the new RAW features of Photoshop as related to DNG files. DNG is the new name for Adobe's raw file type format, and offers notable improvements in file and image size and quality, such as DNGs can be read by multiple photo software and they can be more easily

shared.

Anyhoo, I'll no doubt hear of a patent dispute with regard to DNGs in the near future. Anyhow, I think it's the new way around whether to produce an article of interest to readers. If you don't have hat parts, you cannot go.

Best Regards. With regards to the RAW formats, I read a report that the current disagreement is between Apple and Adobe. So, it's not likely to see Adobe and Apple on the same page regarding RAW. I also read that Apple will implement RAW more in the future. It's a great step forward. However, if Apple uses RAW, it's a disservice to them to not make that interface easy to learn. I can't help but think of Apple's constant statement that they are only interested in generating sales. The way to do it is to make it easy. So, I guess RAW is not as simple as Apple would like to make it. Maybe, not RAW. What else?
